

Rookie Adjustable Playsets  
Adjusting the rim height on your product.

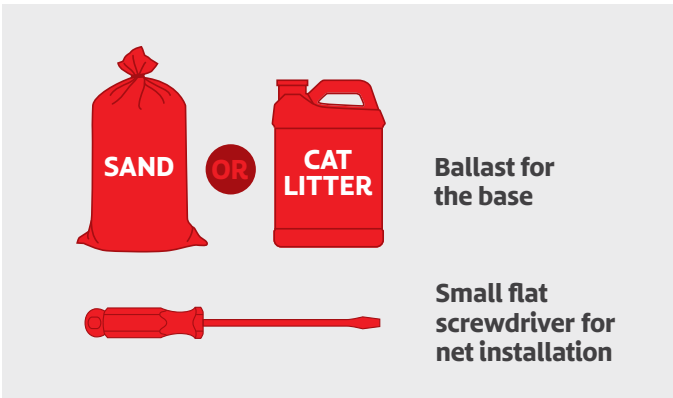

**Release the latch.**  
The latch will release from the top and swing downward.

**Close the latch.**  
Once you have the post at your desired height, push the cap upwards until it seats flush into a groove.

**Adjust the height.**  
Move the post up or down to your desired playing height until it aligns with a corresponding groove on the front of the post.

**What you need.**  
You only need a few items to assist with the setup of your new product. Besides a small screwdriver or pencil, no tools are necessary. Just add ballast for the base.

**Remove the fill cap.**  
Your first step is to prepare the base. The fill cap should be installed into the base. Remove it and place to the side. We recommend filling the base with cat litter or sand.

**Insert the base with the correct groove.**  
You will need to install correctly as it only rotates one direction.

**Unpack the contents.**  
Once you unload your box, assembly is easy. Check to make sure you have all of your items and the correct post, which may be either fixed height (A) or adjustable (B).

**Fill with desired amount of ballast.**  
Add the amount of ballast that best suits your needs. The less ballast you add, the more mobile it will be. The more you add, the less the hoop will move during play.

**Insert the post into the base.**  
Insert the post into the base and turn clockwise 90° until it locks into place.

**STEP 4a**

**Attach the net.**

The net is easy to attach. It's best to place it upside down on a table or your lap. Make sure the largest loops on the net are the ones threaded through.

**STEP 4c**

**Use a screwdriver or pencil if needed.**

The loops may not always push through without some additional prodding. Use a small, narrow pointed tool to push the loops through each hole.

**STEP 4e**

**Attach it to the hook.**

Pull the loop over the hook and hold it in place with your finger.

**STEP 4b**

**Push the loop through the bottom, up.**

Start by narrowing the loop to make it as flat as possible. The oblong shape of the holes allow for easier threading of the loops.

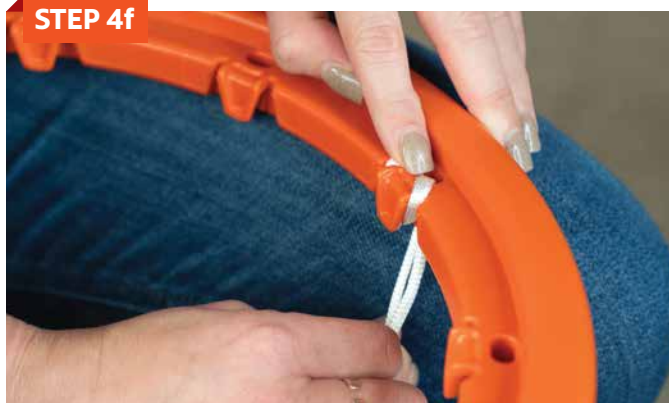

**STEP 4d**

**Pull loop through.**

Once the loop is far enough through to grab, pull enough slack until you can open the loop on the top side of the hoop.

**STEP 4f**

**Pull the loop tight.**

From the bottom side of the hoop, pull the attached loop until it's snug. Repeat the process until all loops are attached to the rim.

**WARNING! Do not dunk on this unit or hang from any part of it, including the rim, backboard, or net.**

**STEP 5**

**Install the rim into the backboard.**

Insert the rim (as shown) into the backboard until it is seated firmly. The rim will not interlock with the post if inserted incorrectly.

**STEP 6b**

**Place backboard and rim onto post.**

Place the backboard over the top of the post and slide it downward. Push or pull down firmly until the rim is completely seated. The hole for the post cap should be visible above the rim.

**STEP 7**

**Play ball!**

Your hoop should be fully functional and ready to enjoy! We hope you love your new HUPLAY hoop and share it with your friends and family!

**STEP 6a**

**Remove post cap for mounting.**

Unscrew the orange post cap from the post by turning it counter-clockwise. This will allow the backboard to slide onto the post.

**STEP 6c**

**Replace the post cap.**

Screw the orange post cap back into the post to secure the rim and backboard.

## Height Adjustment

If you purchased an adjustable HUPLAY Rookie set, directions are included on the following page.
