

Weed Tool

Manual Weed Puller

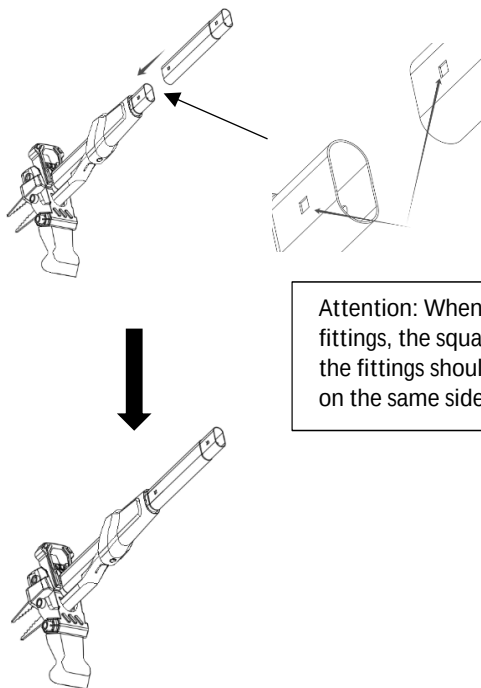

-Instruction manual-

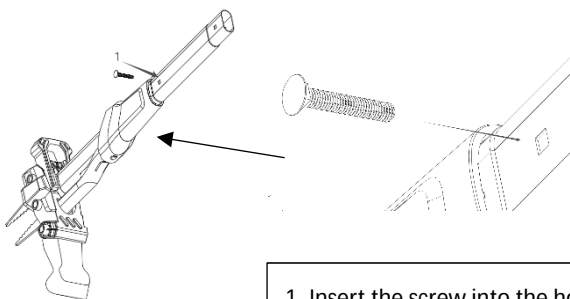

Assemble

Step 1: Insert the middle connecting pipe onto the short connecting pipe.

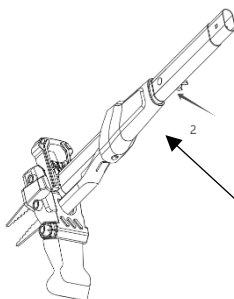

Attention: When installing fittings, the square holes on the fittings should be placed on the same side.

Step 2: Connect the two pipe fittings with screws and nuts and tighten them.

1. Insert the screw into the hole of the pipe fitting.

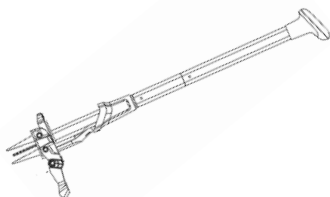

Attention: When inserting the screw, insert it from one end of the square hole and insert the square at the root of the screw into the square hole of the pipe fitting.

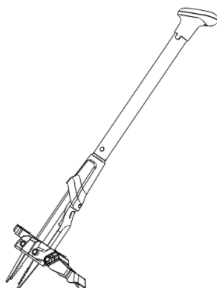

2. Tighten the nut and screw.

Step 3: Install the long connecting pipe onto the middle connecting pipe. Refer to steps 1 and 2 for specific instructions.

Assembly completed as shown in the diagram :

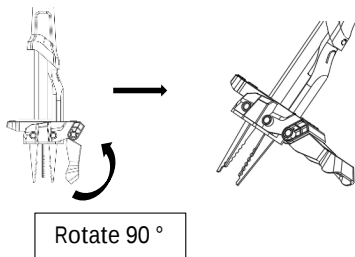

Special reminder: If the product is found to be too high during use, the middle connecting pipe can be removed and the long and short connecting pipes can be connected to each other.

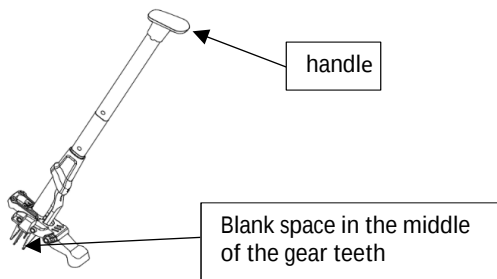

Usage operation

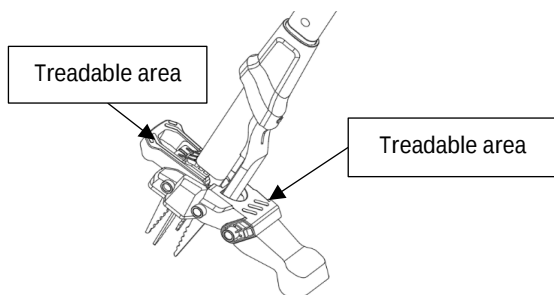

Step 1: When receiving the product for the first time, rotate the rear pedal up 90 °to make it horizontal. (When the product leaves the factory, the rear pedal is in a folded state)

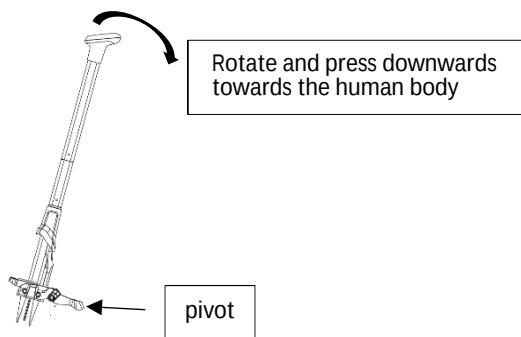

Step 2: Hold the handle and gently place the blank space in the middle of the 4 teeth on the weed that needs to be pulled out.

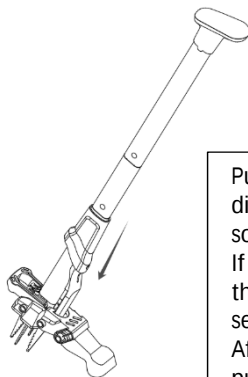

Step 3: Gently step on the pedal with your foot and fully press the gear teeth into the soil. (Note: This product has two trampling positions, which can be chosen according to personal habits)

Step 4: Press the handle downwards towards the human body until the weeds detach from the soil.

Step 5: Push the push rod handle to detach the soil and weeds from the teeth.

Push the push rod handle in the direction of the arrow to push the soil and weeds away from the teeth. If they cannot be pushed off at once, they can be operated back and forth several times. After pushing away, please reset the push rod handle.

Attention:
