Recommend to use

1

A simple method is to hang your hammock with Hammock Straps around your posts, pillars or open beams. Without complicated knots, it is very convenient for you to set up and take down. It is lightweight and portable, so you can take it with you anywhere you want. Our Engineers like to take them to beaches and public parks or go hiking.

Notice: Hammock Straps sold separately.

2

You can hang the hammock on the stand. Ensure the stand is sturdy enough to support your weight. For safety, please do sit on the middle of the hammock and hold the fabric of your both sides while using the hammock for the first time.

Notice: Hammock Stand sold separately.
