

Installation Guide for Flip Door Storage Cabinets

Accessory list (taking the 4th floor as an example)

Start assembling

The door stop with a metal strip should face forward

1. Remove the ordinary shelves and door latches and install them with small screws.

2. Then, fix the ordinary shelf to the left side of the bracket with large screws (note that the groove of the bracket should be aligned with the groove of the shelf).

3. Remove the top layer plate and install it with large screws.

4. Remove the back plates in sequence and insert them along the grooves of the brackets.

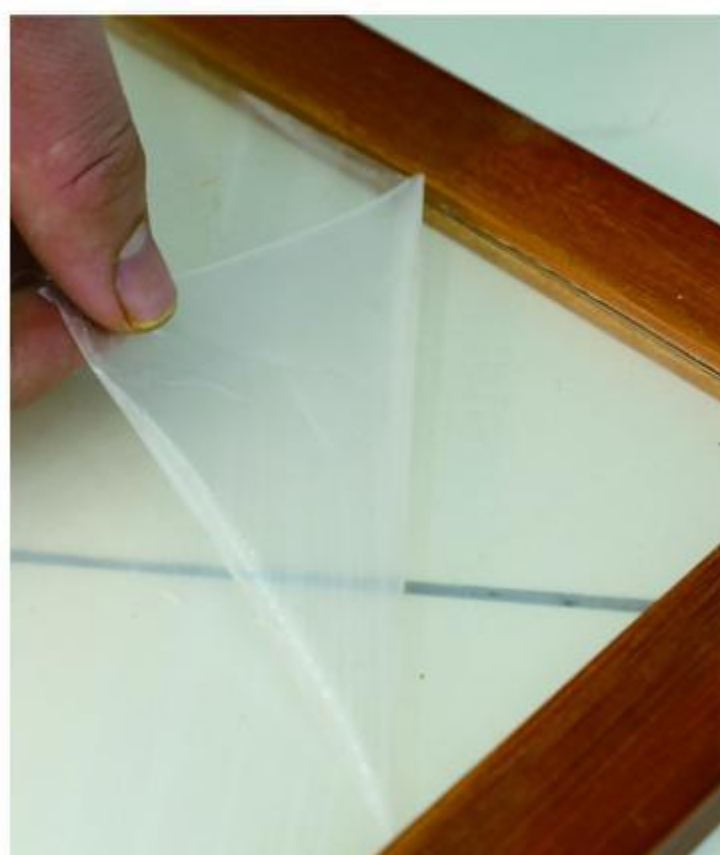

Don't tighten the screws in front for now

5. Remove the side bracket on the right and install it with large screws.

Remember to insert the metal strip into the hole, not the groove

6. Remove the metal strip and insert it into the hole of the side bracket.

7. Take out the front and back sides of the door panel and slowly tear off the film respectively.

The door gasket and door pull ring are installed with medium-sized screws.

Metal clips are inserted into both ends of the door

8. Remove the door panel, door gasket, door pull ring and metal clip, and install them as shown in the figure.

Since the screws in the fifth step were not tightened, you can gently pry open the side bracket

9. Gently pry open the right side bracket, then insert the metal strip on the door panel into the groove of the side bracket and finally tighten the screws.
