D Operation Guide

Igniting the Fuel

▲ WARNING:

Risk of burning!

When petrol or white spirits are ignited uncontrollable heat can develop as a result of deflagration. You should therefore only use harmless fuel.

1. Use quality products.
2. Stack some of the charcoal or briquettes in the charcoal plate (26).
3. Place one or two solid firelighters on top of the layer of charcoal or briquettes. Ignite these firelighters using a long match.
4. Let the solid lighters burn for 2 to 4 minutes. Then fill the charcoal plate (26) slowly with more charcoal or briquettes. The maximum amount of charcoal is 2.75 kg.
5. A white layer of ash should develop on the fuel after approximately 15 to 20 minutes. This indicates that the optimal grilling condition has been reached. Distribute the fuel evenly in the charcoal plate (26) using a suitable metal tool.
6. Insert the greased grill and then you can start barbecuing.

E Maintenance & Disposal

a. Cleaning and Maintenance

▲ WARNING:

Risk of burning!

Allow the barbecue to cool down completely before cleaning it.

Never use water to quench the hot barbecue. This could result in burning or scalding.

Occasional cleaning is necessary to preserve the beautiful appearance of the barbecue. Do not use any scouring agents.

1. A rinsing cloth and some water with a commercial detergent is sufficient for the normal cleaning process.
