

- **Anchor & Screw:** This type of hanging hardware is used on wall mounting items that have a thin frame or design that does not allow regular hangers to be easily concealed see **Figure 10** & **Figure 11** below for an example. This type of hardware does not need to be on a stud, as it can go directly into drywall.

Figure 8: Typical anchor & screw hardware pack

Anchors

Screws

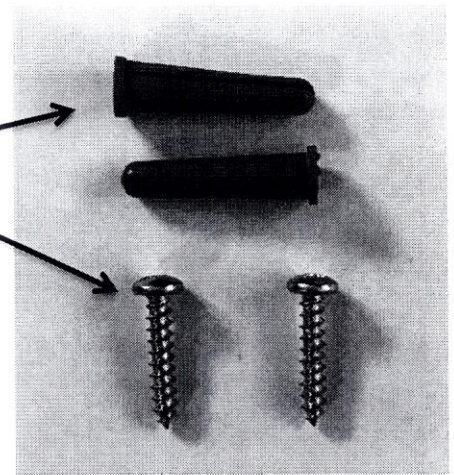

Figure 9: The part of the screw that is exposed is what will engage with the hanging components (either key hole or sawtooth) on the back of the item.

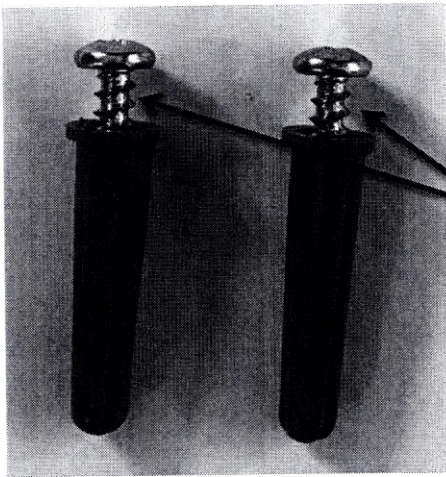

Figure 10: Front view of item 04100 which uses anchors & screws to mount flush on the wall

Figure 11: Side view of item 04100 showing points of engagement for anchor & screw hanging hardware
