

# Plant Tower Assembly Guide

Item / Article PT-001 · No tools required

Match each numbered drawing to the parts in your box.

## Before You Start

Work on a flat surface. Parts click together — do not force them. If a piece will not seat, check orientation and the UP markings in Step 5.

## Assembly Steps

- 1 Assemble the planter box**  
Bring the side panels together at the corners. Press until you hear a click. You should have a complete open-top square box.
- 2 Confirm the box**  
Check that all four sides are locked and the box sits square. Repeat for each additional planter box included with your tower.
- 3 Attach the water tray**  
Set the assembled box onto the matching base tray. Press down until it clicks. This tray holds water and supports the finished tower.
- 4 Insert the inner plate**  
Place the perforated plate (the piece with holes) into the top of the box. It holds soil and lets water move between levels.
- 5 Install the upright supports**  
Insert the slatted supports into the corners of the base with the UP markings facing the top of the tower. Push down until each piece seats. Stack the next box the same way.
- 6 Finish, plant, and water**  
Continue stacking until the tower is full height. Fill each level with potting mix and plants. Pour water into the opening on the side of the base tray. Water wicks upward.

## Quick Tips

- Keep every UP arrow pointing toward the top of the tower.
- Do not force parts. If a piece does not click, check orientation and try again.
- Set the finished tower on a level patio, deck, or firm ground before adding soil.
- Water only at the base opening shown in Step 6. Do not overfill the reservoir.
