

Installation Steps

Turn off the power at fuse or circuit box

1. Attach the four wood frames to the long frame. Secure the wood frames to the light fixture using the provided screws.

2. Thread the wires through the rods. Select the appropriate rods according to the desired hanging height. [Only one side of the rod requires the wires to pass through; the other side does not.]

3. After installing the rods, attach the canopy and secure it with the provided screws.

4. Refer to the illustrations in the printed instruction manual. Use the wall anchors and screws to securely attach the mounting bracket to the wall.

5. Connect the fixture wires to the power supply wires using the wire connectors. Secure the canopy cover with the ball nuts.
