

Wardrobe Lift

Instruction Sheet

1. Fix both left and right system by at least 8 pcs fixing screw on each system, for better result, please fix 12 pcs screws on each system.
Make sure that the left and right systems are in a symmetrical vertical and horizontal position. Then press down the Anti-collision block into the correct place as the pic shows.

2. Assemble the main pole to the hanging pole by using 1 pc Ø3*5 screw, pls. make sure the main pole is in the middle place when you pull down lift.

3. Fix the handle to the main pole by using 1 pc Ø3*5 screw, and adjust the length of the hanging pole 9cm less than the inside width of the wardrobe.

4. Pull down the arm of the system and place the plastic bracket on both side. Insert the hanging pole to the bracket and fix it together by using the hexagon screw.

5. Recommended loading capacity: ≤10kgs

① When pulling down the hanger, please hold the rod with your hand so that it can drop smoothly. / Pls don't let it fall suddenly.

② When raising the hanger, please raise it to 45 degrees with your hands first, and then the damping effect can take effect.
