

# Installation Guide

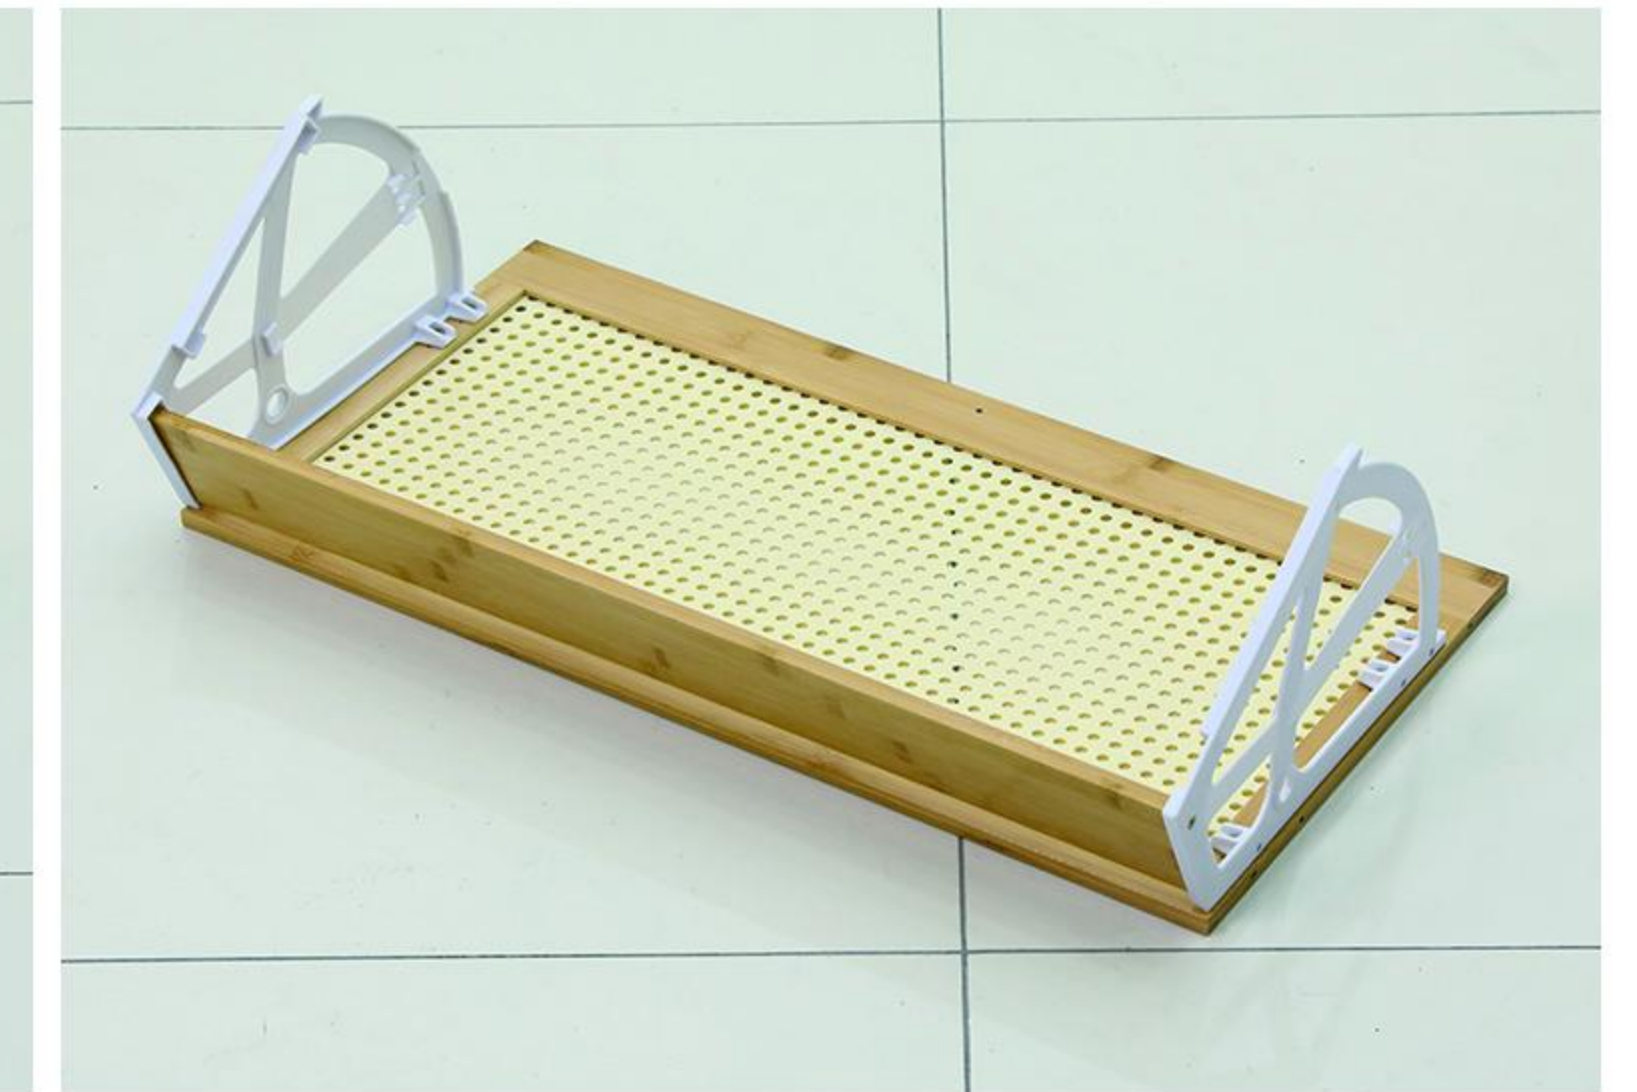

## Accessory list

## Door panel installation

1. Remove the door panel and plastic baffle and install them on both sides with small screws.

2. Remove the baffle and install it with small screws.

3. Remove the door panel stopper and install it with small screws.

4. Remove the door handle and install it with a small flat head screw.

## Installation steps

1. Remove the side bracket and bracket stopper and install them with large screws  
(Vertical attire at the back, horizontal attire at the front)

2. Remove the side bracket and install it with large screws

3. Remove the top layer board and install it with large screws

4. Remove the door card strip and insert it into the side bracket

5. Remove the smooth interface and insert it

6. Then fix the door panel to the side bracket with large screws  
(The large screw passes through the smooth interface)

7. Take out the vertical bar and fix it to the side bracket with a large flat head screw nut. Pay attention to aligning the holes of the two side bars

8. Remove the hook bar and fix it to the side vertical bar with a large screw

9. Remove the top stopper and fix it with a large screw

10. Remove the hook and install it with a small screw

11. Remove the door panel and fix it to the side bracket with small screws

12. Install another one in the same way and complete the installation
