Steamers Assembly Guide

List of Accessories

First, let's use this steamer
Open the safety valve

Then, use a funnel and measuring cup to add the
appropriate amount of water

This steamer has a maximum water capacity of 1800 ml

Then tighten the safety valve

Connect the power

Flip the switch

This is the power indicator light

This is the heating indicator light

Steam heating is complete
This indicator light will go out

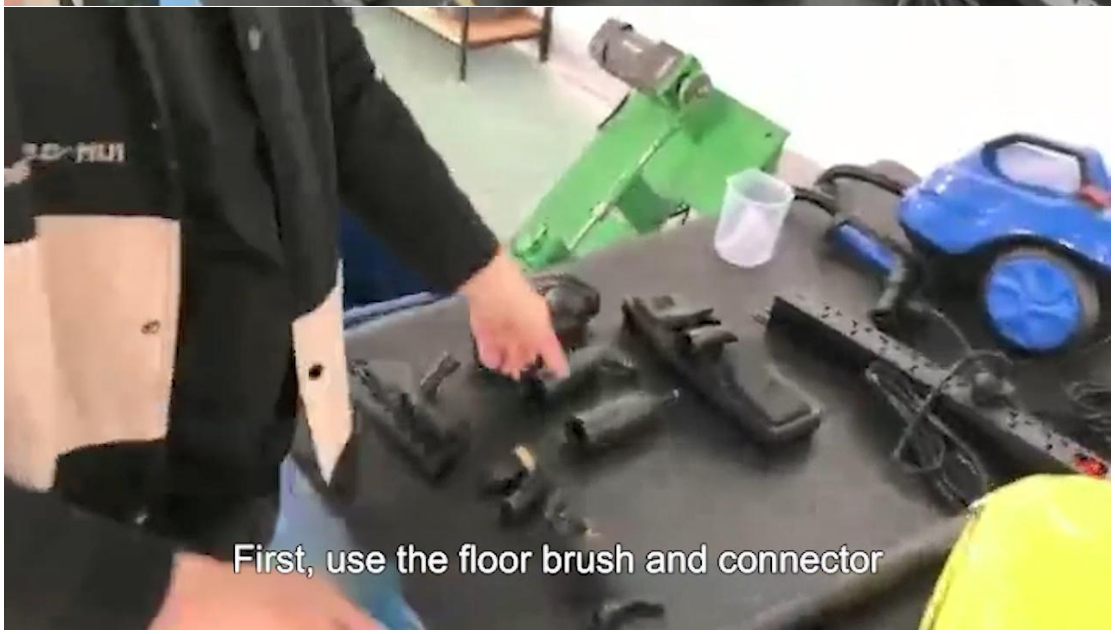

Once the indicator light goes out, you can use it

Let me show you how to use the main components of the steamer

First, take two extension rods

Then connect the safety catches of the two extension rods

Gently push in until the safety catch pops up, and
the connection is complete

First, use the floor brush and connector

Then gently align the floor brush with the connector

Give it a little force and rotate it 180 degrees, and it will pop up

Give it a little force and rotate it 180 degrees, and it will pop up

We then install the product

You can use it like this

If it feels short

You can add an extension rod

Then point the safety buckle toward the top

Use the gun handle to push it in and you're done

If we're done using it

You can put this product in the back of the floor brush holder

You can put this product in the back of the floor brush holder

Put it in, it looks beautiful

Then we use the rotating brush

The brush head must be facing downwards

Then push the gun handle in and the buckle pops up

Now you can use it

If you feel the length is not enough, you can add an extension rod

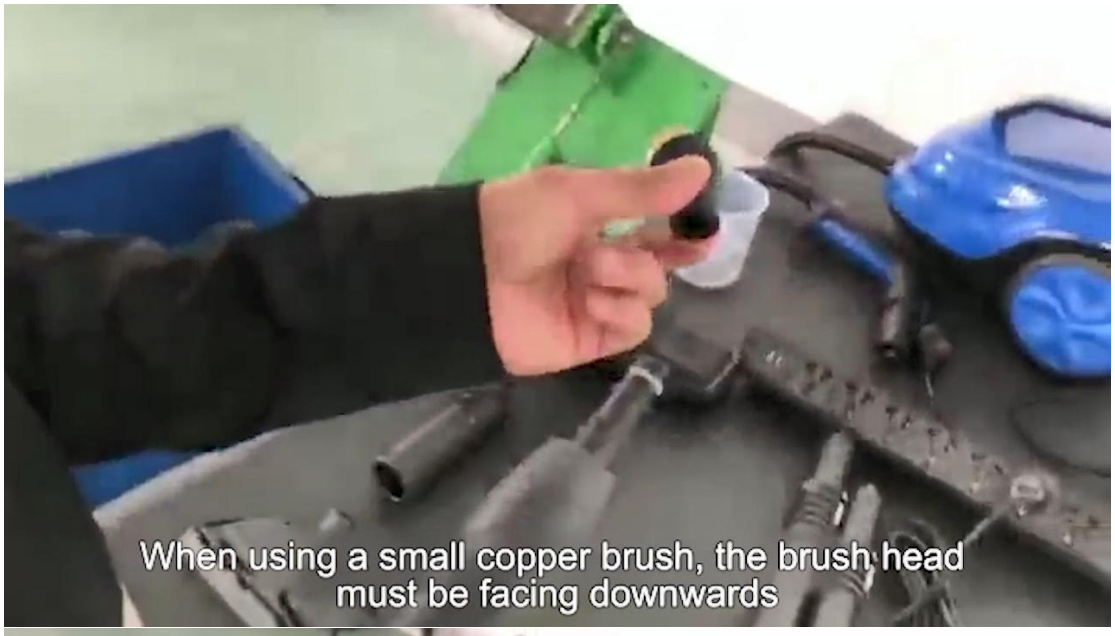

We have other recommendations

You can use a copper brush or a small round brush and
a high-pressure nozzle

We all use straight-tube adapters

When using a small copper brush, the brush head
must be facing downwards

Aim at the groove and push it in gently

Then rotate it a little to the right until it reaches the bottom of
the groove, and you can use it

The large round brush is operated in the same way
as the small round brush

If you feel the length is not enough using these
accessories, you can add an extension rod
