

HANGING INSTRUCTIONS

1. Select the desired location on the wall
2. Measure the distance from the floor or ceiling to the top center of the item in its desired location – mark the wall
3. Measure the distance from the top center of the item to the center of the rings – mark the wall accordingly
4. The **bottom** of the j-hook should cover the holes marked on the wall in step 3
5. Double check the location of the marks on the wall before installing the hanging hardware.
6. Before hanging the item, measure from the floor to the bottom of each j-hook to make sure they are the same. If the measurements differ, adjust the hooks by raising or lowering the nut on the threaded rod portion of the hangers.
7. To install your mirror, hang both of the rings on the back of the mirror over the j-hooks, allowing the weight of the mirror to rest on both hooks. **NOTE: large or heavy items may require two people to install – NEVER HANG A MIRROR BY ONE RING OR HANGER AT A TIME.**
8. If further adjustment is necessary, raise or lower either side to level your frame using the nut on the threaded rod without removing the frame from the wall – this will require two people
